

Sprague Fountain Construction

Sprague Fountain on the Capitol Mall is under construction March through May 2025.

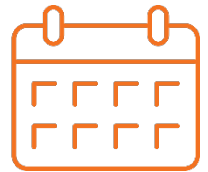

Why?

Leaking pipes are creating a safety hazard in the fountain electrical room, keeping the fountain from running.

Why Now?

The leaking pipes created a safety hazard, and it is important to remove the safety hazard quickly and have the fountain operational by summer 2025.

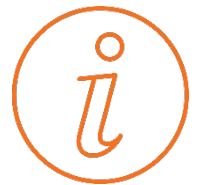

Impact

Construction is expected to last from mid-March to mid-May 2025. The project is aiming to minimally impact the area and will not block any walkways around the mall. There are chain-link fences in place to ensure a safe construction zone along with signage describing the work for members of the public to be informed of what is happening.
